**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Rydbeck et al..

The claimed invention reads on Rydbeck et al. as follows:  
Regarding claim 1, Rydbeck et al. discloses a mobile telephone (communication terminal) (fig. 1 number 100) capable of utilizing plurality of radio communication services respectively provided by a plurality of radio communication systems establishing shared radio communication system (col. 1 line 61 through col. 2 line 6 and col. 2 lines 35-66), comprising: hardware processing (controller) (160) for performing common hardware processing necessary for utilizing the radio communication services (col. 2 lines 35-66 and col. 3 line 12 through col. 4 line 63); an communication module (IC card) that stores a plurality of communication software packages necessary for the respective radio communication services (col. 2 lines

35-66 and col. 3 line 5 through col. 4 line 63); software selection unit that selects one communication software package out of the communication software packages stored in the IC card (col. 3 lines 5-48), which one corresponds a communication and software executing unit that executes the selected communication software package (col. 3 lines 5-48).

Regarding claim 2, Rydbeck et al. discloses the communication module comprises protocol information related to each network (software program relating signal Transmission/reception, a software program relating signal modulation/demodulation and software program relating to application) (col. 1 line 60 through col. 2 line 6, col. 2 lines 44-55 and col. 3 line 5 through col. 4 line 31).

Regarding claim 3, Rydbeck et al. discloses a software acquisition that acquires another communication software package stored server (personal computer) provided in the shared communication system (col. 3 line 35 through col. 4 line 32).

Regarding claim 4, Rydbeck et al. discloses a controller and sensor (software reading unit) that reads the selected one of the communication software packages stored in the module

Art Unit: 2683

which selected one corresponds to communication to the communication service to be utilized (col. 4 lines 33-63).

3. Claim 5 is rejected under 35 U.S.C. 102(b) as being anticipated by Korpela.

Regarding claim 5, Korpela discloses a base station (software transmitting server) (fig. 3), comprising: a store (26) (software storing) unit that stores plurality of protocol descriptions (communication software packages) respectively necessary for utilizing a plurality of communication services respectively provided by plurality radio communication systems (col. 4 line 14 through col. 5 line 8); and a software transmitting unit downloads (transmits) the stored communication software packages to a communication terminal (col. 6 line 8 through col. 7 line 3).

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the

Art Unit: 2683

art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Korpela in view of Rydbeck et al..

Regarding claim 6, Korpela discloses an card writing (fig. 3) apparatus, comprising: a store (software storing unit) (fig. 3 number 26 and col. 4 lines 14-67) that stores a plurality of communication software packages respectively necessary for utilizing a plurality of communication services respectively provided by a plurality of radio communication systems (col. 4 lines 57-67); and a software transmitting unit that transmits the stored communication software packages to a memory (IC card within a mobile (communication) terminal (col. 6 lines 7-46). Korpela differs from claim 6 of the present invention in that it does not explicit disclose an IC card to be attached to a communication terminal. Rydbeck et al. teaches an mobile telephone having an attachable/detachable communication module (120) that stores protocol information for multiple wireless networks (col. 3 line 5 line 4 through col. 4 line 33). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Korpela with an IC card to be attached to a communication terminal in order for the base station to download a network protocol to the mobile terminal memory that can be detached and attached and be used when needed based upon the network services provided, as taught by Rydbeck et al..

### **Conclusion**

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Cooper et al. (U.S. Pub. No. 2003/0148786) discloses an apparatus for configurable selection and acquisition of a wireless communication system. Buytaert et al. (U.S. Patent 6,198,919) discloses a method for communication with object and module used thereby.
